We make technical standards for customer equipment and customer cabling. Our technical standards reference or incorporate industry standards in full (unless otherwise specified).

Our experienced engineers can design a custom DC power solution that is compliant to relevant Australian Standards. We specialise in the delivery of: DC and AC distribution and cabling systems

The type of circuit breaker installed shall be appropriate to the type of supply - AC supplies shall be equipped with AC circuit breakers and DC supplies shall be equipped with specific DC circuit breakers.

ITS cabinet with IP56 rating and marine grade aluminium--ideal for telecommunication and outdoor equipment protection. Built for harsh Australian conditions, with powdercoated blue finish and

Devices called power supplies or regulated DC power supplies are therefore required to convert commercial AC power into regulated DC power to drive ICs and other electronic components.

The Eaton® Data-Voice-Video Metro Power Solutions range of DC power systems is designed for telecommunication network applications requiring compact, efficient and flexible DC power.

DC supplies rated 12V and 24V with the appropriate terminal panels, enclosed in IP44-rated enclosure, shall be provided for equipment requiring DC power. The connection of the DC supplies to mains

Minimum service conditions for DC distribution systems are stated in document R522687, General Substation Requirements Standard. All equipment must be capable of operation at its specified rating

The DC power supplies are located in terminal stations to provide critical DC power for the operation of electrical protection, control, metering, and SCADA systems associated with the electricity
