In contrast to silicon solar modules, which comprise discrete solar cells arranged in strings, CdTe modules are monolithically integrated and directly deposited on single flat sheets of glass.

Considering these aspects, the objective of this study was to analyze the applicability of solar signage windows as building exterior materials for reducing the building energy consumption.

CdTe Solar Glass utilizes vacuum magnetron sputtering to deposit 5µm cadmium telluride layers on ultra-clear float glass, achieving 40-70% visible light
