Because energy supply facilities typically last several decades, technologies in these classes will dominate solar-powered generation between now and 2050, and we do not attempt to look beyond

In 2025, renewables accounted for 88.4% of all new generating capacity, while natural gas added just 11.4%, according to FERC data.

These massive solar farms can help stabilize grids and reduce energy costs across communities, but smaller-scale residential solar is still the best way to reduce your individual energy
