Over 50% of Croatia's transmission grid has exceeded its design lifespan, and its modernization requires both time and significant investment. At the same time, the energy system faces challenges in

Two recent events highlight the growing importance of grid stabilization in power systems with high shares of VRE generation and during

As part of the European Green Deal, Croatia aims to achieve a 42.5% share of renewables in gross final energy consumption by 2030. To reach this

With more than 3,500 miles of coastline to explore, it's easy to fall under the spell of this Balkan nation's dazzling Adriatic setting. But Croatia's fine shingle beaches are just the beginning....

The outline map above is of Croatia, a country occupying an area of 56,594 km² (21,851 sq mi) in Europe. The map shows mainland Croatian territory along with its numerous islands on the

After three years of delays, Croatia is finally close to adopting a methodology for the calculation of the grid connection fee for renewable power

In this article, we will delve into the various issues affecting the renewable energy landscape in Croatia, including regulatory challenges,

Croatia's revised 2030 National Energy and Climate Plan aims to reach a 42.5 percent share of renewable energy by 2030 and a 62 percent drop

The development will support the installation of up to 60 megawatts of grid-connected battery storage capacity and the deployment of a VPP

Strategically placed battery storage would unlock gigawatt hours of additional renewable feed-in and shore up Croatia's volatile midday power prices, a new study finds. One of the main
