MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed for crude oil

The new Schmidt Laboratory for Materials in Nuclear Technologies (LMNT) at the MIT Plasma Science and Fusion Center accelerates fusion materials testing using cyclotron proton beam

The tools needed to be compatible with any terrain or container elevation. And each of the preferred battery OEMs had different packaging, size, weight, and lift requirements for modules.

IPD field professionals worked with the client team to create and document the methods, procedures and training materials needed to safely and properly use the tools and load batteries.

Investigators in the MIT Energy Initiative and the MIT Plasma Science and Fusion Center have found that -- depending on its future cost and performance -- fusion energy has the potential

IPD leveraged our rare combination of engineering, battery storage, and field service expertise to design, fabricate, test, certify, and deploy custom, battery loading tool solutions for a global BESS

Geothermal energy, a clean, continuous energy source accessible in many locations, has been slow to catch on. Nearly 2,000 years ago, the Romans made extensive use of geothermal

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

A look at how AI can be used to help support the clean energy transition by helping to manage power grid operations, plan infrastructure investments, guide the development of novel

As MIT's first vice president for energy and climate, Evelyn Wang is working to broaden MIT's research portfolio, scale up existing innovations, seek new breakthroughs, and channel
