In this video, we demonstrate how to build a multi-node microgrid model in Xendee from setting up nodes, loads, transformers, and cables to optimizing distributed energy resources like solar,

In this example, you learn how to: Design a remote microgrid that complies with IEEE standards for power reliability, maximizes renewable power usage, and reduces diesel consumption.

This white paper focuses on tools that support design, planning and operation of microgrids (or aggregations of microgrids) for multiple needs and stakeholders (e.g., utilities, developers,

Recent studies have developed several MPC formulations, which use various types of strategies.
