160 If you want to replace multiple characters you can call the `String.prototype.replace()` with the replacement argument being a function that gets called for each match. All you need is an object

There's a function to find a substring within a string (`find`), and a function to replace a particular range in a string with another string (`replace`), so you can combine those to get the effect you want:

ECMAScript 2021 has added a new String function `replaceAll`. A long time ago in a galaxy not so far away, people used `split + join` or regular expressions to replace all occurrences of a string. I

Get practical tips on how to fix broken solar panels safely at home. Learn DIY repair steps, when to call a pro, and how to keep your system running strong.

58 There's no need to use `replace` for this. What you have is an encoded string (using the `string_escape` encoding) and you want to decode it:

Identify the damage, such as cracks or delamination. 2. Gather necessary tools and materials, including a multimeter, adhesive, and protective equipment. 3. Clean the affected area to

The `string.replace()` is deprecated on python 3.x. What is the new way of doing this?

When replacing all occurrences of `aba` in `ababa` with `ca`, which result do you expect? `caba?` `abca?` `cca?`

0 You can use the following function to replace Character or String at a particular position of a String. To replace all the following match cases use function.

In this video, learn how to repair a broken solar panel at home. Whether your panel has cracked glass, wiring issues, or damaged cells, we'll guide you step by step on how to fix it.
