On January 14, 2025, Ivanpah's owners and the DOE finalized negotiations with PG& E to terminate two long-term purchase power agreements.

California regulators blocked the shutdown of Ivanpah, one of the world's largest solar thermal plants, against the wishes of the Biden and Trump administrations.

Ivanpah uses power tower solar thermal technology to generate power by creating high-temperature steam to drive a conventional steam turbine. Mirrors are used

The Ivanpah Solar Electric Generating System is a 386-megawatt project consisting of three solar concentrating thermal power plants located in the Mojave Desert in San Bernardino County. The

California regulators blocked the shutdown of Ivanpah, one of the world's largest solar thermal plants, against the wishes of the Biden and Trump

Ivanpah was envisioned as a flagship demonstration of solar-thermal tower technology, using concentrated sunlight to generate steam and drive turbines. The concept promised clean,

One of the most ambitious solar projects in history is quietly heading for shutdown after just a decade of operation. The Ivanpah Solar Power Facility

So let's all take a moment to bid farewell to Ivanpah, the multimillion-dollar death trap that killed birds, displaced tortoises, and wasted billions--all for an energy source that couldn't even

Ivanpah, which is operated by Texas-based NRG Energy, is a very different model from most utility-scale solar farms with rectangular panels. It uses thousands of devices called heliostats

The Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across
