Light is a part of our everyday experience and we cannot live without it, but what exactly is light and how does it work? In this video, we'll discover what light is and see what forms it takes as

The Sun and other stars, fires, torches and lamps all make their own light and so are examples of sources of light. Some animals, such as fireflies and glow-worms, are light sources.

The prices in this section are illustrative and solely reflect PPAs that utilities and electricity providers have signed that bundle the sale of both

A red multiple-resonance molecule with fast reverse intersystem crossing functions as both emitter and sensitizer, enabling efficient Organic Light-Emitting Diodes with suppressed efficiency...

RateWatt provides electricity price data and energy generation statistics for every US state, sourced

In this chapter, we study the basic properties of light. In the next few chapters, we investigate the behavior of light when it interacts with optical devices such as mirrors, lenses, and apertures.

The 13th annual Cost of Wind Energy Review uses representative utility-scale and distributed wind

This chart shows the levelized cost of energy generation by source (in U.S. dollar per MWh).

Comprehensive 2025 guide to renewable energy costs. Compare solar, wind, and clean energy pricing vs fossil fuels. Includes latest LCOE data, trends, and projections.

Light is electromagnetic radiation that can be detected by the human eye. Electromagnetic radiation occurs over an extremely wide range of wavelengths, from gamma rays with wavelengths
