Can anyone help me understand when to use `:NEW` and `:OLD` in PLSQL blocks, I'm finding it very difficult to understand their usage.

Ah, but new experts will rise up and embrace the new, friendly Stack Overflow that they have always wanted. And maybe rediscover the same things the bitter, hateful old guard found.

After researching and testing dozens of portable power stations over the past seven years, we found that the River 2 Pro easily stands out from the competition.

`new()` describes a constructor signature in typescript. What that means is that it describes the shape of the constructor. For instance take `{new(): T; }`. You are right it is a type. It is the type of a class

Experience the power of Goal Zero by improving your lifestyle with our portable power stations, solar generators, solar panels, power banks, and home energy storage solutions.

Between natural disasters and power outages, a portable power station is a useful backup option. We've tested more than 140 portable power stations to recommend you the best ones.

You should use `new` when you wish an object to remain in existence until you delete it. If you do not use `new` then the object will be destroyed when it goes out of scope.

The `new` operator uses the internal `[[` method, and it basically does the following: Initializes a new native object Sets the internal `[[` of this object, pointing to the Function prototype

If you're looking for the best portable power station for home backup, this guide covers the top models built to keep your essential devices running when the grid goes down.

It is NOT "bad" to use the `new` keyword. But if you forget it, you will be calling the object constructor as a regular function. If your constructor doesn't check its execution context then it won't notice that "this"
