On the Power BI Desktop menu, select the Format menu under Visual Tools, and then select Edit interactions. You need to have the slicer selected. Only then you see the according Filter

You can retrieve the contents of the CSV file using the Get file content action in Power Automate/Microsoft Flow, and then using the Parse CSV action to transform the file contents into a

OverviewPower controlAerodynamicsOther controlsTurbine sizeNacelleBladesTowerRotation speed must be controlled for efficient power generation and to keep the turbine components within speed and torque limits. The centrifugal force on the blades increases as the square of the rotation speed, which makes this structure sensitive to overspeed. Because power increases as the cube of the wind speed, turbines must survive much higher wind loads (such as gusts of wind) than those loads from whic

Is this just part of the building process? Or If I have one query A that loads across the network and 5 follow up queries that refer to query A will power query / excel be reading the across

The workings of a wind turbine are much different, except that instead of using a fossil fuel heat to boil water and generate steam, the wind is used to directly

Explore blade types for wind turbine to harness renewable energy efficiently! Discover diverse designs for optimal performance.

Both approaches work OK in Power BI desktop report, However once I published to Power BI service and after several refreshes (initially it was NZ time), the time turn back to UTC time. I don't

You are confusing Power Automate with Power Automate Desktop. The link you provide is for Power Automate, so those functions won't work in the PADesktop. There is an action named

Wind turbine blades have been designed in many shapes and styles throughout the evolution of wind energy technology. The blade of a modern wind turbine is now
