---

Solar PV power is expected to record highest growth rate of 13.60% by 2035, followed

Turkey, located at the crossroads of Europe and Asia, has been transforming its energy sector to reduce dependence on imported fossil fuels, cut carbon

Explore the basics of renewable energy, including solar, wind, hydro, and geothermal power, and their role in sustainable development and reducing carbon emissions.

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy,

In recent years, Turkey has achieved significant growth in wind and solar energy.

Turkey's renewable energy hits a 22% share in 2025, leading 16 regional countries. Discover how Turkey became Europe's leader.

Renewable energy is energy derived from natural sources that are replenished at a higher rate than they are consumed.

We're a team of renewable energy professionals dedicated to advancing critical community resiliency through optimally sized solar and storage projects.

In 2024, 99 percent of Turkey's 8.7 GW capacity addition came from renewable energy sources. With

renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy),
