Developing a utility-scale energy storage project requires alignment between

`wait_until` waits for a result to become available. It blocks until specified `timeout_time` has been reached or the result becomes available, whichever comes first. The return value indicates why

I get this warning while testing in Spring Boot: Mockito is currently self-attaching to enable the inline-mock-maker. This will no longer work in future releases of the JDK. Please add

Three projections for 2022 to 2050 are developed for scenario modeling based on this literature. In all

The `get` member function waits (by calling `wait ()`) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, `valid ()` is false.

By bridging the gap between academic research and real-world implementation, this review underscores the critical role of lithium-ion batteries in achieving decarbonization, integrating

Considerations When future grants are defined on the same object type for a database and a schema in the same database, the schema-level grants take precedence over the database

The promise is the "push" end of the promise-future communication channel: the operation that stores a value in the shared state synchronizes-with (as defined in `std::memory_order`)

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, `std::packaged_task`,

2) Move constructor. Constructs a `std::future` with the shared state of other using move semantics. After construction, `other.valid() == false`.
