This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find

Globally, the share of wind and solar in power generation rose by 1.5 pp in 2024 to 15% (nearly +13 pp since 2010). It increased by 3 pp to 18% in China (+16 pp since 2010) and by 2 pp to 17% in the USA

The "Renewables" column indicates the percent of that country's overall electric generation that was renewable. Links for each location go to the relevant

In 2022, 4.6% of the world's electricity generation came from solar energy, an increase from the previous year. China consumed the largest share

The contribution of solar energy (including concentrating solar power (CSP) and solar photovoltaic (PV)

power) to global electricity production, as one form of renewable energy sources, is
